Summary

Aspiring Software Engineer with a strong foundation in data structures, algorithms, and full-stack web development. Experienced in building machine learning-driven and data-intensive applications using Python, Java, React.js, and SQL. Skilled in designing REST APIs, integrating CNN-based models, and deploying scalable, production-ready applications on cloud platforms. Adept at translating complex technical problems into efficient, maintainable software solutions.

Technical Skills

Languages:	C++, Java, Python, SQL
Frontend:	React.js, HTML5, CSS3, Bootstrap
Backend:	Flask, Node.js, Express.js, REST APIs
Databases:	MySQL, MongoDB
Machine Learning:	TensorFlow, Keras, CNN, Image Classification, Data Preprocessing
Cloud & Deployment:	Render, Vercel, Docker
Developer Tools:	Git, GitHub, VS Code, Postman, Power BI
Concepts:	Data Structures, Algorithms, Problem Solving, OOP

Projects

NeuroWeb – AI-Based Alzheimer’s Detection Platform *React.js, Flask, Python, TensorFlow, MySQL*
Live Demo | GitHub

- Engineered a two-stage Alzheimer’s detection platform combining cognitive screening with MRI-based image analysis.
- Designed an interactive Stage 1 assessment module using questionnaire-based cognitive tests to flag early risk indicators.
- Implemented a Convolutional Neural Network (CNN) in Python to classify MRI brain scans for disease markers.
- Built a hybrid risk-evaluation engine that fused behavioral assessment data with imaging-based predictions.
- Deployed a full-stack application with a Flask backend, MySQL database, and React frontend for end-to-end usability.

PinIt – Academic Resource Sharing Platform *React.js, HTML5, CSS3, Bootstrap*
Live Demo | GitHub

- Developed a responsive web platform enabling students to share academic resources and notices efficiently.
- Designed an intuitive, accessible UI with Bootstrap to improve usability across devices and screen sizes.
- Structured content architecture to streamline navigation and enhance overall user experience.

Online Voting System *React.js, Node.js, Express.js, SQLite, JWT*
Live Demo | GitHub

- Engineered a secure, authenticated voting system restricting participation to verified eligible students.
- Implemented validation logic to prevent duplicate votes and enforce one-person-one-vote integrity.
- Designed a MySQL-backed data layer to manage voter records and generate accurate, tamper-resistant results.
- Deployed the application for live use, ensuring reliable performance across concurrent voting sessions.

Internships

AI, Data Analytics & Power BI Intern *NoviTech R&D Private Limited*

- Applied machine learning techniques to develop basic predictive models for data analysis.
- Processed datasets and generated visualizations that improved data interpretation and reporting efficiency.
- Built Power BI dashboards enabling structured visualization and clearer communication of data insights.

Education

B.E. in Information Technology *2022 – 2026*
A. P. Shah Institute of Technology, Mumbai *CGPA: 8.0 / 10*

Certifications

- Ethical Hacker – Cisco Networking Academy
- Data Analysis with Python – IBM SkillsBuild
- Data Engineering Virtual Internship – AWS Academy
